

PILOT™ Big & Tall, 24/7 Seating

Pilot Seating with T-Arms

Everybody is different. Look around you. Your office isn't filled with carbon copies of the "average employee". It's filled with people—people of every shape and size who sometimes don't seem to have anything in common, except their office furniture. Maybe that's the problem.

You don't just need a task chair that the "average employee" will be comfortable in, you need a task chair that YOU will be comfortable in—all the time. If you have found that other chairs just don't measure up, Pilot is ready to welcome you aboard.

Big and tall users will appreciate its expansive 24" wide seat, which features a waterfall edge to relieve pressure on the thighs, and high back that provides gentle support to the entire spine. To further prevent fatigue, 3.75" of plush, resilient foam envelop both the seat and back.

Because it was designed for round-the-clock use, Pilot won't just be comfortable the first time you use it, it will be comfortable every time. A heavy-duty frame including an oversized steel J-bar and reinforced mechanism guarantee it.

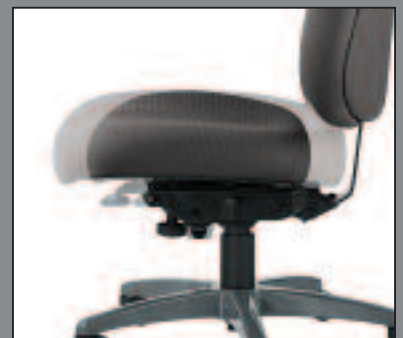

Urethane T-arms can be adjusted 2.5" in height for maximum comfort.

For greater accessibility and room, break-away T-arms lift and drop back out of the way.

Back angle adjustment allows the user to adjust seat and back angle to desired position.

The seat slide function allows the user to move the seat depth to a comfortable position.

PILOT™ Big & Tall, 24/7 Seating

Pilot Seating with Loop Arms

Every body is different. Pilot may be designed for round-the-clock use, but we aren't. If you work for an organization that never sleeps, your workspace probably isn't yours alone, but it doesn't have to feel that way. The Pilot task chair offers an abundance of features that customize it to you.

An ultra-durable pneumatic lift mechanism allows Pilot's seat height to be adjusted safely and easily with a lever beneath the seat. You can also make back height and seat depth adjustments to the chair while seated.

While a full upright and locked position might be appropriate most of the time, when you want a new perspective Pilot's rocking tilt mechanism adjusts the seat and the backrest simultaneously to provide it. For first-class comfort and freedom of movement, break-away arms are a great option if you wear a tool belt to work.

With so many ways to make Pilot your own, the only question is where do you want yours to take you?

Fixed loop arms give Pilot a traditional task chair look and feel.

Adjustable loop arms can be adjusted 2.5" in height for maximum comfort.

Pilot's back height can be manually adjusted over a 4" range, putting lumbar support right where you need it.

A heavy-duty pneumatic cylinder raises and lowers the seat height anywhere from 18-23".
